

About Us

At **Sleeve GmbH**, we're not just developing software—we're **redefining what's possible in automotive and embedded systems**. As pioneers in remote development and scalable remote hardware management, our platform empowers global teams to innovate faster and collaborate seamlessly. Join us as we drive the future of software-defined vehicles and beyond!

Job Description

As an **Operations & DevOps Engineer** at Sleeve, you will play a crucial role in building and optimizing the backbone of our cutting-edge platform. Your mission will be to enhance our Linux-based infrastructure, streamline containerization workflows, and support our distributed development environment. Working closely with our customers, development, and product teams, you'll be at the forefront of ensuring the seamless deployment and operation of our software across a wide range of embedded systems and automotive platforms.

Your Tasks:

- **Infrastructure Management:** Deploy, configure, and maintain scalable Linux-based systems, ensuring maximum reliability and performance.
- **Containerization:** Implement and manage containerized applications using the latest container orchestration platforms.
- **Automation & CI/CD:** Design and implement CI/CD pipelines to automate the build, test, and deployment of software for embedded systems and cloud environments.
- **Monitoring & Troubleshooting:** Monitor system performance, identify bottlenecks, and troubleshoot issues across a variety of embedded and cloud platforms.
- **Security:** Ensure that systems are secure, up-to-date, and compliant with industry standards and best practices.
- **Collaboration:** Work with cross-functional teams to deliver efficient solutions that meet business and technical requirements.
- **Embedded Systems Support:** Prepare and work with embedded systems and hardware.

If you're passionate about embedded infrastructure, love optimizing and scaling solutions, and are driven to make a real-world impact in cutting-edge automotive and industrial projects, we'd love to have you on board!

Your Profile:

Experience

- 3+ years of experience in a DevOps or Operations role with a strong focus on Linux systems and administration.
- Proven expertise in containerization technologies.
- Hands-on experience with embedded systems in automotive or related industries.

Technical Skills

- Strong knowledge of Linux systems, including networking, and security.
- Proficiency in shell scripting and tooling used in system administration and automation.

- Experience with CI/CD tools (e.g., GitLab CI) and infrastructure as code (IaC) tools (e.g., Ansible, Terraform).
- Familiarity with cloud platforms (AWS, GCP, or Azure) is a plus.
- Understanding of network protocols and troubleshooting tools.
- Familiar with operation and disaster recovery protocols.

Problem-Solving

- Ability to troubleshoot complex issues in both containerized and embedded environments.
- Excellent analytical and problem-solving skills, with a focus on delivering practical solutions.

Soft Skills

- Strong communication skills to work effectively with both technical and non-technical stakeholders.
- Self-motivated, proactive, and able to work independently or as part of a team.

Why Join Us?

- **Innovative Projects:** Work at the forefront of automotive and embedded technology with international customers, where your contributions help shape the future of smart vehicles and connected cloud solutions.
- **Empowering Culture:** Join a supportive environment where flat hierarchies, open communication, and a hands-on approach empower every team member to share ideas and drive change.
- **Community:** Collaborate with a diverse group of professionals who are passionate about pushing technical boundaries and challenging conventional thinking.
- **Flexible Working Environment:** Enjoy the freedom to design a work schedule that suits your life, with options for remote work and flexible hours.
- **Ownership & Impact:** Take charge of your work and turn innovative ideas into tangible results, making a meaningful impact on industry trends and technological advancements.
- **Inclusive & Diverse Team:** Thrive in a young company that values a range of perspectives, where inclusivity and equal opportunity are embedded in how we work.
- **Growth Opportunities:** Be part of an expanding company that prioritizes your professional development and opens up pathways for long-term growth.
